SCHOOL OF ENGINEERING AND TECHNOLOGY

Total Number of Major/Minor Projects in UG

	Course Code	Program	Total Number of students Involved in projects
Projects	CSD0603	**BTECH**	**111**
	BCAH-605	**BCA (Hons)**	**37**
	BCA-605	**BCA**	**38**
	MCA-206	**MCA**	**87**

The students undertake mini and major projects for increasing their practical knowledge and experience.

Total Number of Internships in UG and PG

	Course Code	Program	Total Number of students Involved in projects
Internships	**CSD0502**	**BTECH**	**108**
	MCA-401	**MCA**	**67**

In the Computer science and Applications disciplines, there is mandatory Internship. In the curriculum design it has been incorporated into the programme and complete it as a mandatory part of final year training.

B.Tech. CS / MCA INTERNSHIP SYLLABUS

Course Description:

This internship course provides students with an opportunity to gain practical experience in the field of computer science by working on a real-world project under the guidance of industry professionals. Students will apply their theoretical knowledge to solve practical problems, develop essential professional skills, and gain valuable insights into potential career paths.

Course Outcomes (COs):

Upon successful completion of this internship course, students will be able to:

- **CO1:** Apply theoretical knowledge from coursework to solve real-world industry problems. (e.g., utilize marketing principles to develop a campaign for a local business)
- **CO2:** Demonstrate proficiency in industry-standard tools and technologies relevant to the internship field. (e.g., use design software to create graphics for a company website)
- **CO3:** Analyze and interpret data collected during the internship experience. (e.g., analyze customer feedback to improve product design)
- **CO4:** Enhance critical thinking skills by analyzing and evaluating the outcomes of assigned projects or tasks.
- **CO5:** Compile a comprehensive report documenting the learning experiences, challenges, and achievements during the internship period.

Course Evaluation:

The student's performance will be evaluated through a combination of the following methods:

- **Project Work (50%):** Contribution to the assigned project tasks, code quality, and adherence to deadlines.
- **Mentor Evaluation (20%):** Feedback from the industry mentor on the student's performance, technical skills, and professional conduct.
- **Final Presentation & Report (20%):** Presentation of the internship project and a comprehensive written report detailing the work completed and learnings gained.
- **Self-Evaluation (10%):** Self-reflection on the internship experience, skill development, and areas for improvement.

Dean
School of Engg. & Tecn
ITM University
Gwalior

Internship Expectations:

- Students will be assigned a specific project or tasks within a larger project by the internship company.
- Responsibilities will vary depending on the internship but may include:

Head

- Coding and development tasks using relevant programming languages and frameworks.
- System design and testing activities.
- User interface and experience (UI/UX) design (if applicable).
- Technical documentation creation.
- Participation in team meetings and discussions.
- Uphold ethical and academic integrity throughout the internship.

B.Tech. CS / MCA / BCA / BCAH Major Project SYLLABUS

Pre-requisites: Completion of core programming, computer science fundamentals, and relevant project management courses

Course Description:

This Major Project course provides students with an opportunity to showcase their acquired knowledge and skills by independently researching, designing, developing, deploying, and documenting a substantial software application or system. Working in small teams, students will gain valuable experience in the entire software development lifecycle (SDLC) or project lifecycle, from problem identification and solution design to implementation, testing, deployment, and maintenance. The course aims to develop students' critical thinking, problem-solving, software development expertise, project management skills, and communication abilities.

Course Outcomes (COs):

Upon successful completion of this minor project course, students will be able to:

- **CO1:** Conduct in-depth research and critically analyze existing solutions in the chosen project area within computer science or information technology. (Evaluate)
- **CO2:** Design a novel and comprehensive software solution using appropriate programming languages, frameworks, and tools. (Design)
- **CO3:** Implement the designed solution effectively, demonstrating core functionalities and addressing potential limitations. (Develop)
- **CO4:** Apply project management principles to plan, schedule, track progress, manage resources, and mitigate potential risks throughout the project lifecycle. (Plan and Organize)
- **CO5:** Effectively document the project, including system design, implementation details, user manuals, deployment procedures, and future enhancements. (Communicate)

Course Structure:

- **Project Selection and Proposal:** Students will form teams (2-4 members) and select a project topic aligned with their interests and program curriculum. A detailed project proposal outlining the problem statement, solution approach, research plan, project timeline, and resource requirements will be submitted for approval.
- **Literature Review and Design:** Students will conduct in-depth research on existing solutions, analyze their strengths and weaknesses, and design a novel solution using appropriate technologies. Design documents and system architecture diagrams will be created.
- **Development and Testing:** Students will implement the designed solution using chosen programming languages, frameworks, and tools. Unit testing, integration

testing, system testing, and user acceptance testing (UAT) will be conducted to ensure functionality, quality, and user satisfaction.

- **Project Management (Ongoing):** Students will utilize project management tools and techniques to plan, schedule tasks, track progress, manage resources, identify and mitigate risks, and ensure project deliverables are met on time and within budget.
- **Deployment and Documentation:** The developed solution will be deployed on a suitable platform (local server, cloud platform) with proper configuration and security measures. Comprehensive project documentation, including user manuals, technical specifications, deployment guides, and future enhancements, will be prepared.
- **Final Presentation and Evaluation:** Students will deliver a final presentation showcasing the project goals, methodology, outcomes, limitations, and lessons learned. The project will be evaluated based on a rubric considering functionality, design, documentation, project management, and presentation skills.

Course Evaluation:

The student's performance will be evaluated through a combination of the following methods:

- **Project Proposal (15%):** Clarity of the problem statement, feasibility of the proposed solution, research plan, timeline, and resource allocation.
- **Design Documents (15%):** Completeness and technical soundness of system architecture, design patterns, and user interface design (if applicable).
- **Project Implementation and Testing (30%):** Functionality, code quality, adherence to best practices, testing methodology, bug resolution, and user acceptance testing results.
- **Project Management (15%):** Effective utilization of project management tools and techniques, adherence to the project plan, meeting deadlines, and managing resources effectively.
- **Project Documentation (15%):** Completeness, organization, clarity, and user-friendliness of project documentation (user manuals, technical specifications, deployment guides, etc.).
- **Final Presentation and Demonstration (10%):** Effective communication skills, clarity of presentation, demonstration of project functionality, and ability to answer questions.

B.Tech. CS / MCA / BCA / BCAH Minor Project SYLLABUS

Pre-requisites: Completion of core programming and computer science fundamentals courses.

Course Description:

This minor project course provides students with a platform to explore a specific area of computer science or information technology by independently researching, developing, and documenting a software project. Working in small teams, students will gain practical experience in the entire software development lifecycle (SDLC) or project lifecycle, from problem identification and solution design to implementation, testing, and documentation. The course aims to strengthen students' problem-solving skills, software development expertise, project management abilities, and communication skills.

Course Outcomes (COs):

Upon successful completion of this minor project course, students will be able to:

- **CO1: Conduct in-depth research and critically analyze existing solutions** in the chosen project area within computer science or information technology. (Evaluate)
- **CO2: Design a novel and comprehensive software solution** using appropriate programming languages, frameworks, and tools. (Design)
- **CO3: Implement the designed solution effectively, demonstrating core functionalities and addressing potential limitations.** (Develop)
- **CO4: Apply advanced software engineering principles, project management principles, and design patterns** to ensure the solution is robust, scalable, and maintainable in the long term. (Design)
- **CO5: Utilize database management systems or advanced programming paradigms** (e.g., object-oriented, functional, concurrency control) to enable efficient data storage, retrieval, and manipulation within the solution or to optimize the solution's efficiency and performance. (Develop)

Course Structure:

- **Project Selection and Proposal (Week 1-2):** Students will form teams (2-3 members) and select a project topic aligned with their interests and program curriculum. A detailed project proposal outlining the problem statement, solution approach, research plan, and project timeline will be submitted for approval.
- **Literature Review and Design (Week 3-5):** Students will conduct in-depth research on existing solutions, analyze their strengths and weaknesses, and design a novel solution using appropriate technologies. Design documents and system architecture diagrams will be created.
- **Development and Testing (Week 6-10):** Students will implement the designed solution using chosen programming languages, frameworks, and tools. Unit testing,
